Light can help exhaust a population. Will accelerate the decline of a population of beetles in a Building. Questions 5 to 9 Do you think the following statements with the information provided in Reading Passage 1? B Wood was not local wood. There are several species that are quite differ from distinguishing. B If you liked ā ē œControl the reading response of death beetles. please share this post and comment. Issues 10 to 13 Choose letter A, b, c or d correct. 1 A kind of beetle towns can be extended ..... 2 You can detect the presence of beetles ..... 3 Write the right letter A-H in boxes 1-4 on the answer sheet. 13 The Daā os caused by the Larchorn House beetle are sometimes more far as London because temperatures have increased. These beetles live in oak wood. This problem can be overcome by obstructing suspicious holes with furniture enamel or covering a group of holes firmly with paper or card. This is and has always been, an installed oak plague. C There was no effective treatment before. A 5. Some scandal disseminated in a building do not need much concern, but dozens of beetles under one end of the beam could indicate the need for some type of treatment if the infested wood is accessible. The second fact is that natural predation will help you. Beetles reproduce rapidly so that many cylovenic beetles can be present and emergency round holes resemble those of furniture from the furniture. Beetles restrict their activities to the lush soft wood of the twentieth century, although there is now some evidence that they will attack an old soft wood. B do not reach beetles. The ararias are a significant predator and will help keep the population of the beetle under control. 4 Beetles will disappear at a very ravenated rate ..... 11 sĀĀm sĀĀm soD .setna sadac©Ād sanu \*Ālatani es is E .aAd led zul al a solrearta se hctawhtaeD ed sojabaracse raparta ed It is worth mentioning. They are also likely to be expensive, but they can be the only way to eradicate a heavy and generalized infestation without causing considerable structural degradation of the building. The first is the Larchorn Beetle ē house (Hyrotropes Bajulus). Woods with an exploited sapwood surface are often found in old buildings and the dais will have occurred during the first days after the woods were installed. The surface spray treatments are generally ineffective because they barely penetrate the surface of the wood and the natural behavior of the beetles do not put it in contact with the insecticide. Bā ē ē a totally dark atmosphere. 3 You can kill the domestic arae Eventually it can be denied to extinction. 6 ā ē obstructing a hole with furniture or paper enamel will catch the beetle inside permanently. C 11. B 13. Answers: -Death clock reading Passage Passage 1 1. False 8. Control of the beetles of the death clock All organisms that give wood in buildings are part of the natural process that carries dead wood to the ground From the forest, it breaks it in humus and recycles the nutrients released in the founders. D 4. True 10. Beetle larvae can cause considerable damage, but infestation has generally been restricted to the southwest of London, possibly because they need a high temperature before the beetles fly. Insecticides formulated as a paste can be effective, whether applied to the surface or collaborated in pre -delayed holes, but formulations can only be obtained by a corrective company. This is a that could be more extended extended of climatic change. D attract other dais creatuers. There are heat treatments for entire buildings and the continental experience is that they are effective. RUGRDS ER. Nachhattar Singh (CEO, Blogger, YouTuber, Motivational speaker) Home Passage 2 Deep infestation within the modified lemon is more differ from detecting, especially because the beetles will not necessarily bite their own emergency holes if there are many others Available holes. Contact insecticides could also kill natural predators. The second is the Lyctus or Pólvora beetle. The infestation of beetles will cease after a few years, but the spray treatment may be necessary if an infestation is heavy.
